

Quality is a key competitive factor today.

No matter how innovative a product is, no matter how straightforward and economical its production and delivery are: If quality is not right, the hoped-for success will not be achieved.

Since 2001 Hawema has been a reliable partner for the automotive industry in Rüsselsheim and its suppliers and ensures the consistent quality of components and individual parts on site.

The expectations and demands of our customers always have the highest priority. Tailored exactly to customer requirements, we take care of a smoothly running production process on a daily basis, monitor warranty complaints or take on sorting, post-processing and testing of individual components.

We accomplish remachining as well as inspection of components , sorting and longer-term special tasks. We work with reliability and diligence, thus supporting our customers to avoid production losses in serial production. Parts which couldn't be used otherwise can be reaccepted for production.

Our company is certified according to ISO 9001:2015.

We would be pleased if you took us into account for coming procurements.

If you like to know more about this interesting opportunity do not hesitate to contact us.
